CORE EXPERTISE

Software Architecture
Distributed Systems
Engineering Leadership
AI-assisted Development
Fintech & Payments

TECH STACK

Languages: Go, Java, SQL (MySQL).

Architecture: DDD, Hexagonal, Event-Driven.

Platform: Docker, Kubernetes, Azure, CI/CD, Prometheus, Grafana, OpenTelemetry.

AI tools: Claude Code, Gemini CLI.

LANGUAGES

Spanish: Native
English: Full Professional
Portuguese: Professional

MARIO MORENO

Hands-on Engineering Leader | Software Architecture · Go · Distributed Systems | AI-assisted development | Fintech (Mercado Pago) · EV charging (VEMO)

SUMMARY

Systems engineer with 20+ years in software, most of them leading teams without leaving the technical work. Led engineering for Mercado Pago's Treasury & FX platform (daily FX volume from \$50K to \$6M USD, cross-border expansion from 2 to 5 countries). Now leading technology at VEMO (EV charging, Mexico): monolith modernization and AI-assisted development in day-to-day delivery.

EXPERIENCE

Senior Engineering Manager | VEMO

Technology Lead, VEMO Charging Network (EV charging, Mexico) **Sep 2025 – Present**

- Own the end-to-end architecture, scalability and availability of the VCN platform; leading the migration from a monolith to a modular hexagonal/clean architecture.
- Brought Claude Code into the team's daily development workflow.
- Shipped a new card payment experience (100% of users) and a discount engine built from scratch, with a team 36% smaller than the previous semester.

Senior Engineering Manager | Mercado Libre

Mercado Pago Treasury & FX platform **Aug 2019 – May 2025**

- Scaled daily FX operations from \$50K to **\$6M USD avg** (120x); made the platform the company-wide source of truth for exchange rates, with direct Citi and JP Morgan settlement integrations.
- Led the re-architecture of the cross-border platform, enabling expansion from 2 to 5 countries.
- Operated high-traffic microservices for Crypto and Dollar MEP operations. Stack: Go, Java, MySQL, on Fury.
- Grew the team from 6 to 30+ engineers across Argentina, Brazil and Mexico.

Senior Technical Lead | In All Media / DataArt

US energy and financial-services clients **Sep 2017 – Aug 2019**

- Technical lead and architect for distributed remote teams, from definition through delivery (.NET, SQL Server, PostgreSQL).

Architect & Subject Matter Expert | Globant

Corporate Architecture Team **Oct 2013 – Aug 2017**

- Implemented the company-wide CI/CD, code review and continuous inspection strategy; participated in design reviews across studios.

PROJECTS

Poor Man's Fury (2026): an internal developer platform built from scratch on a single home server (K3s, Vault, CI/CD, Prometheus, Grafana, Loki, Tempo, OpenTelemetry, Backstage), documented in a 5-part series at mamcer.github.io.

EDUCATION

Systems Engineer (Software Engineering), UNICEN (UNCPBA), Argentina
